The genome 'sequence of Drosophila melanogaster.";
                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE SPECIFICITY: HIGHEST EXPRESSION IN FAT BODY. MAYBE BLOOD CELLS PARTICIPATE IN THE PRODUCTION OF THE PEPTIDE.
DEVELOPMENTAL STAGE: EXPRESSED RAPIDLY AND STRONGLY AT ALL STAGES. POLYMORPHISM: 2 ALLELIC FORMS (A1 AND A2) VARYING IN TWO AA SOSTION. THE ISOFORM SHOWN HERE IS A1.
SIMILARITY: TO DIPTERICIN, HEMIPTERICIN, DROSOCIN, APIDABCINS AND TO THE C-TERMINUS OF ABARCIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cole S.T., Eiglmeier K., Parkhill J., James K.D., Thomson N.R., Wheeler P.R., Honore N., Garnier T., Churcher C., Harris D., Mungall K., Basham D., Brown D., Chillingworth T., Connor R., Davies R.M., Devlin K., Duthoy S., Feltwell T., Fraser A., Hamlin N., Holroyd S., Hornsby T., Jagels K., Lacroix C., Maclean J., Moule S., Murphy L., Oliver K., Quail M.A., Rajandream M.A., Rutherford K.M.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic Acids Res. 18:4017-4017(1990).
-!- FUNCTION: THIS PROTEIN IS A COMPONENT OF THE REACTION C.
OF PHOTOSYSTEM II, ITS EXACT FUNCTION IS NOT YET KNOWN.
-!- SIMILARITY: BELONGS TO THE PSBI FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2 AAHKFMVAMFLAVAVVLGLA-----TSPTAEGGKATTEEQKLIEDVNAS 45

```
Peptide including at least 1 human antigenic determinant of Kentucky
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present peptide is a human antigenic determinant contg. peptide, comprising residues 29-48 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergens. A compsn. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (HIGG (+)/HIGE (-)), T-cell (+).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Blue Grass allergen - from Poa p IX 9p. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and deplete allergen-specific antibodies

            Lol pV, is a major allergen of ryegrass pollen, and is encoded by the cDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lol pV, is a major allergen of ryegrass pollen, and is encoded by the colons sequence of clone 12R (AAQ8592), a full-inorth clone derived from a lambda gill library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).

                                                                                                                                                                                                              Gaps
      comprising residues 39-58 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergens. A compan. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compan. may also be used to deplete allergen specific antibodis from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (higG (-)/higE (-)), T-cell (-).
present peptide is a human antigenic determinant contg. peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibody production against allergenic antigen (Ag) is specifically suppressed by treatment with the junctional segment of the alpha and/or beta chain of the Ag receptor of suppressor T (Ts) cells (TCR) induced by tolerogenic Ag-PEG conjugates. Induction of antigen-specific suppression by treatment of mice with TCR alpha-chain peptides was demonstrated using the peptides given in AAR62912-17. The peptide of AAR62917 was used as a control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     effecting immuno:therapy - have an amino a portion of the CDR3 region of a T-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW76449-W76534 are peptide fragments of a natural pollen allergen, Phl p 5b, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.

                                                                                                                                                                                                                                                                    AAW76449-W76534 are peptide fragments of a natural pollen allergen, phl p 5b, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with Tge antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.

Philosophy isolated from Graminas meets. This allefon can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide including at least 1 human antigenic determinant of Kentucky Blue Grass allergen - from Poa p IX gp. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and deptete allergen-specific antibodies

beta guedanes gene. Also described are: (A) a connective cut beta guedanes gene. Also described are: (A) a connective described are transgenic monocot plant, comprising: (i) a transcriptional regulatory region which hybridises under high stringency with a rice beta cylucanase promoter; and (ii) a DNA sequence heterologous to the cregulatory region, and encoding a protein to be produced by the plant; and (iii) a second DNA sequence encoding a signal polypeptide operatively confliked 5' to 3', so that the signal polypeptide is in translation frame with the protein, and is effective to facilitate secretion of the protein caross aleurone or soutellar epithelium layers into the endosperm of seeds obtained from the plant; (B) a menocot plant stably transformed with CG1: (C) seeds from the above plant; (D) a method of enhancing the resistance of a monocot plant to fungal infection by stably transforming catably transforming a plant with CG1: Obtaining seeds from the transforming a plant with CG1. Obtaining the protein from the seed endosperm; (F) an isolated protein having the characteristics of a rice beta-glucanase enzyme, corresponding to beta-glucanase enzyme, corresponding to beta-glucanase enzyme, corresponding to beta-glucanase enzyme, corresponding to beta-glucanases enzyme, corresponding to pera-glucanases and plants. The polynucleotides of the invention are useful to transform corporate increased resistance to fungal infection, improved growth corporate increase obtained from the plant.
                                                                                                                                                                                                                             polynucleotides (PN) comprising
                                                                                                                                                                                                                                             a sequence which hybridises under high stringency with a rice
beta-glucanase gene. Also described are: (A) a chimeric gene (CG1) used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Plant; transcription factor; gene expression; eucalyptus; pine; acacia; poplar; sweetgum; teak; mahogany; bZIP; G-box bliding factor; basic helix-loop-helix zipper; homeotic; homeodomain; homeobox; MADS; homeodomain; zipper; LIM domain; AP2; EREBS; zinc finger domain;
                                                                                      New polynucleotides which hybridise with rice beta-glucanase genes useful for transforming monocot plants for various characteristics including increased resistance to fungal infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eucalyptus grandis transcription factor protein sequence #458

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lol pV, is a major allergen of ryegrass pollen, and is encoded by the colon Sequence of clone 12R (AAQ8532), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins; that are immunologically related to Lol PV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine. Cell proliferation or valid differentiations or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, o. stem cell growth factor activity, hemmatopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                  phi p bb, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                      Gaps
                   AAW76449-W76534 are peptide fragments of a natural pollen allergen,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   *00000000000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                            The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic hell's tipper. homeotic/homeodomain/homeobox/MADS, homeodomain cys2His2, CCAAT box elements and MYB.
                                                                                                                                                               New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pollen; allergen; Phl p 5b; IgE; antibody; grass; reactivity; T cell; epitope; immunotherapy; allergy; hyposensitisation.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM8110 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
cample, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
cample, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
cappelment the patients own production of (I). Additionally, (I)
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK84950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and mersetacia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 11; SEQ ID NO 13269; 3071pp + Sequence Listing; English.

This sequence represents the C-terminal sequence of a truncated Xenopus type II activin receptor protein to which a human c-myc tag has been fused. The protein is used to study the role of transforming arouth factor (TGF) beta in the differentiation of progenitor cells into either neurons (neuralisation) or into epidermal cells during embryonic morphogenesis. This is based on the discovery that embryonic progenitor cells will automatically differentiate into neural tissue unless the cells are contacted with, or express, members of the TGF-beta family, such as activin or bone morphogenic protein (BMP)-4, whereupon the cells differentiate into epidermal tissue.

To study this effect in the P19 cell line, a pluripotent mouse embryonic carcinoma cell line, a dominant-negative truncated activin receptor from Xenopus was cloned into plasmid p286478 (see AAT42283) and transformed into P19 cells. The truncated receptor inhibits the induction of epidermis by the TGF-beta family protein. The truncated receptor is tagged with the myc epitope tag in order to identify the endogenous protein from the transformed protein. Induction of the formation of protein from the transformed protein. Induction of the formation of epidermis by the TGF-beta protein can be used for the treatment of e.g. which can be used for the testing of skin or cosmetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                          ð
                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MHC Class II molecule possessed by the patient can be demonstrated for the peptide and the peptide is able to induce a late phase response in an individual who spessesses the MHC class II molecule. The methods can be used for desensitising patients to allergens present in e.g. grass, tree and weed (including ragweed) pollens, fungi and moulds, foods, stinging insects, the chiromidae (non-biting midges), spiders and mites, housefly, fruit fly, sheep blow fly, screw worm fly, grain weevil, silkworm, honeybee, non-biting midge larvae, bee moth larvae, mealworm, cockroach, larvae of Tenibric molitor beetle, mammals such as cat, dog, horse, cow, pig, sheep, rabbit, rat, guinea pig, mice or gerbil. They can also be used to produce immunological vaccines which may be used to prevent and/or treat
                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gill library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
comprising residues 129-148 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergens. A compsn. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibodies from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (hIgG (-)/hIgE (-)), T-cell (-).

                                                                                                                                                                                                                                                                                                                                                                                                                Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).

```
Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

```
Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gill library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lolium perenne Lol pV and Dactylis glomerata Dac gV epitope(s) and DNA - for treating sensitivity to rye-grass pollen allergen or an immunologically cross-reactive allergen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lolium perenne; Lol pV; Dactylis glomerata; Dac gV; epitope; sensitivity; ryegrass pollen allergen.

                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                     Lol pV, is a major allergen of ryegrass pollen, and is encoded by the cDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide including at least 1 human antigenic determinant of Kentucky

A compson. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compson may also be used to deplete allergen specific antibodies from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Blue Grass allergen - from Poa p IX gp. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and deplete allergen-specific antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigenic determinant; recombinant; Kentucky Blue Grass; pollen; allergen; antigenic; rKBG60; Poa p IX group; desensitisation; allergi; prevention; development; reaction; grass; antibody; anergise; producing cell; diagnosis; human; clone 60; immunological response; B-cell; hIgG; hIgE; T-cell.

AAW76449-W76534 are peptide fragments of a natural pollen allergen, phl p 5b, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Coryneform bacterium; amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present peptide is a human antigenic determinant contg. peptide, comprising residues 99-118 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergens. A compson. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compson may also be used to deplete allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (higg (-)/higE (+)), T-cell (+).
                                                                                                      Antigenic determinant; recombinant; Kentucky Blue Grass; pollen; allergen; antigenic; rKBG60; Poa p IX group; desensitisation; allergic; allergy; prevention; development; reaction; grass; antibody; ahergise; producting cell; diagnosis; human; clone 60; immunological response; B-cell; hIgG; hIgE; T-cell.

AAW76449-W76534 are peptide fragments of a natural pollen allergen, Phl p 5b, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with igg antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
 and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pollen; allergen; Phl p 5b; IgE; antibody; grass; reactivity; T cell; epitope; immunotherapy; allergy; hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modified recombinant allergens - useful for immuno-therapy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 44; DB 19; Length 12; Pred.                                                                                                                                                                                   These
                                                                                                                                                                               sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                               Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAW76449-W76534 are peptide fragments of a natural pollen allergen,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                           Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Functional surrogate; analyte; affinity receptor; immunoreactive group; mimic; homogenous immunoassay; detection; diagnostic analyte; Chlamydia; cardiac marker; tumour marker; allergen; hormone; fertility; myoglobin; pregnancy; infectious disease; ferritin; myosin light chain; troponin;

The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity to a be mead upon interaction with the affinity the analyte present in a sample. Functional surrogates such as this and with the analyte for a limiting amount of its affinity receptor. Functional surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polypeptides, polysaccharides, polynucleotides, altocoproteins and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumour markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             allergens, hormones related to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle stimulating hormone, human growth hormone, immunoalobulin E, prolactin, parathyroid hormone, human placental lactogen, hepatitis antigens or antibodies against them, human chorionic gonadotropin, human luteinising hormone, cytomegalovirus, chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoslobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and CA125 (a tumour marker).
follicle stimulating hormone; human; growth hormone; immunoglobulin E; prolactin; parathyroid hormone; placental lactogen; hepatitis antigen; antibody; chorionic gonadotropin; luteinising hormone; cytomagalovirus; Streptococcus; rubella; toxoplasma; DK-MB; prostate-specific antigen; carcinoembryonic antigen; alpha-fetoprotein; herpes virus; CA125.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a monoclonal anti-hepatitis B antigen binder sequence from the R26 library which may be used in the conjugate of th invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such as ferritin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MHC Class II molecule cossessed by the patient can be demonstrated for the peptide and the peptide is able to induce a late phase response in an individual who possesses the MHC class II molecule. The methods can be used for desensitising patients to allergens present in e.g. grass, tree and weed including ragweed) pollens, fungl and moulds, foods, stinging insects, the chiromidae (non-biting midges), spiders and mites, housefly, fruit fly, sheep blow fly, screw worm fly, grain weed, silkworm, honeybee, non-biting midge larvae, bee moth larvae, mealworm, cockroach, larvae of Tenibrio molitor beetle, mammals such as cat, dog, horse, cow, pig, Tenibrio molitor beetle, mammals such as cat, dog, horse, cow, pig, produce immunological vaccines which may be used to prevent and/or treat conditions involving hypersensitivity to allergens. This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MtC class II molecule cossessed by the patient can be demonstrated for the peptide and the possesses the MtC class II molecule. The methods can be used for desensitising patients to allergens present in e.g. grass, tree and weed (including ragweed) pollens, fungi and moulds, foods, stinging insects, the chiromidae (non-biting midges), spiders and mites, housefly, fruit fly, sheep blow fly, screw worm fly, grain weevil, silkworm, honeybee, non-biting midge larvae, bee moth larvae, mealworm, cockroach, larvae of the chiromidae control of the chiromidae of the mould of the chiromidae of the conditions involving hypersensitivity challengens. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
pollen allergens. A compsn. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibodies from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (hIgG (-)/hIgE (-)), T-cell (-).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lollum perenne Lol pV and Dactylis glomerata Dac gV epitope(s) and DNA - for treating sensitivity to rye-grass pollen allergen or an immunologically cross-reactive allergen.

                         Lol pV, is a major allergen of ryegrass pollen, and is encoded by the cDNA sequence of clone 12R (AAQ85912), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                 Gaps

```
Lol pV, is a major allergen of ryegrass pollen, and is encoded by the cDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one re call pricope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             phl p 5b, isolated from Graminae species. This allefgen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pollen; allergen; Phl p 5b; IgE; antibody; grass; reactivity; T cell; epitope; immunotherapy; allergy; hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW76449-W76534 are peptide fragments of a natural pollen allergen,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modified recombinant allergens - useful for immuno-therapy of

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gill library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).

Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lolium perenne Lol pV and Dactylis glomerata Dac gV epitope(s) and DNA - for treating sensitivity to rye-grass pollen allergen or an immunologically cross-reactive allergen.

Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gt11 library. Peptides (AAR71508-61) comprising at least one used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pollen; allergen; Phl p 5b; IgE; antibody; grass; reactivity; T cell; epitope; immunotherapy; allergy; hyposensitisation.

                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (IL) is useful in for generating antibodies against it, detecting or
                                                                     phl p 5b, isolated from Graminae species. This allegen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, that the encoded polypeptides have one or more amino acid substitutions, allergens and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                    Gaps
                                                             AAW76449-W76534 are peptide fragments of a natural pollen allergen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

The products of the invention have vulnerary activity. A copolymer produced from a gene that encodes a derivative of AC_1_0A copolymer was suspended in water to form a gel, which was then used to treat a wound. The cell binding domain was the integrin ArgGlyAspSer sequence which is known to bind to gplia/IIIa proteins expressed on fibroblast cells necessary for matrix formation for the regeneration of skin. Fibroblasts become
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Coiled coil protein; copolymer blocker; vulnerary; wound treatment; integrin; fibroblast cell; matrix formation; skin regeneration; scaffold; antibiotic; dressing; abrasion; burn.
quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of Sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dressing abrasion, burn or non-puncture wound, comprises two alpha-helical protein blocks, random-coil protein block and linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic block copolymer with an antibiotic compound, useful for

           serving as a scafed for the regeneration of tissue surrounding the wound. A synthetic block copolymer together with an antibictic compound is useful for wound dressing. The copolymer is useful for dressing abrasion, burn or non-puncture wound. Unlike conventional polymers, the polymers of equal size are produced biologically from a single template. The intermolecular binding of alpha-helical blocks are monodisperse which gives a uniform pore size depending on the length of random-coil block. The new copolymers have low molecular weight hence have decreased viscosity solutions or gals under suitable conditions. This sequence method of the invention.
                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide including at least 1 human antigenic determinant of Kentucky Blue Grass allergen - from Poa p IX gp. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and deplete allergen-specific antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present peptide is a human antigenic determinant contg. peptide, comprising residues 109-128 of the recombinant Kentucky Blue Grass pollan allergen KR6660, which is from the Poa p IX sp. of grass pollen allergens. A compson. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compson may also be used to deplete allergen specific antibodies from an individual, and anergise allergen specific antibodies from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose grass
 entrapped within the gel and thus remain at the site of the wound,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigenic determinant; recombinant; Kentucky Blue Grass; pollen; allergen; antigenic; rKBG60; Poa p IX group; desensitisation; allergic; allergy; prevention; development; reaction; grass; antibody; anergise; producing cell; diagnosis; human; clone 60; immunological response; B-cell; hIgG; hIgE; T-cell.

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention according to molecular invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of an an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for allatiramer acctate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune opophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, crohn's disease, chronic immune thrombocytopaenia curpura, colitis, contact sensitivity disease, diabetes mellitus, Graves
